# Fiscal Intelligence

Technological solutions that aim at enhancing the revenue capacity of public administration through the use of estimation mechanisms and optimization of revenue process

## BYbYZ]hg

- Increase in revenue
- Better assertiveness in the estimation of revenue
- Identification of potential existing revenue
- Increase in efficiency and control over taxpayers and their operations due to the automation and optimization of the fiscal surveillance process
- Gradual enhancement of the spontaneous tax revenue, with substantial increase in total tax revenue
- Strengthening and maximization of tax control with an increase in the perception of subjective risk in tax evasion

## Value Proposition

- Application of predictive analysis techniques, data mining, statistical and econometric modelling for estimation and analysis of revenue and development of predictive and prospective situations
- Identification of variables to maximize tax revenue by identifying and measuring the hypothesis related to these variables, with a better probability of occurrence
- Review, systematization, listing and automation of the fiscal process and audit plan;
- Supply, introduction and customization of supporting IT solution to planning and execution of fiscal management
- Training and Technology transfer
